

Welcome! Thank you for choosing to participate in our AdaptiCon study. During this experiment, you will participate in two activities inspired by the games *Guess Who* and *Spot the Difference*. Specific instructions for each activity will be included.

Please note that you must have normal hearing as you will wear headphones during the activities.

Guess What Instructions:

In this activity, you will guess the items your opponent's mystery character card has by taking turns asking yes/no questions. Does your character have a hat? Do they have a flower? The first player to guess all 3 items of your opponent's card correctly wins the game!

To set up the game, players will sit across from each other and take a set of red or blue **18-item** cards. These cards will be placed face up in a **3 by 6 layout (3 rows of 6 cards each)**. A set of white mystery character cards will be placed face down.

When the game begins, each player will select a mystery character card, keeping it hidden from their opponent. Players will take turns guessing their opponent's items until the first player guesses all 3 items correctly. Some items might be unexpected, so you might have to ask your partner for clarification. Play 3 matches with your partner and see how many items you can guess!

Spot the Difference Instructions:

In this activity, partners will work together to identify the differences between two similar pictures. Each participant will have a picture presented on their monitors that is a similar scene with some differences. Questions will show up on the screen for partners to take turns reading aloud and discussing the locations of items based on their own pictures. For instance, one picture may show a cat in a tree, while the other picture may have the cat sitting on a park bench. Play 3 rounds with your partner and find the **(fill in number)** differences each time!
